

# Webhooks

Webhooks provide a powerful way to integrate this platform with external systems by sending real-time data to external URLs when specific actions or events occur. This allows for seamless event-based communication with tools such as messaging services, notification platforms, or other external applications.

## Features of Webhooks:

- **Event Triggers:** Webhooks activate whenever certain predefined actions occur within the system, such as a protocol being updated or a new user being added.
- **Real-Time Data:** They send immediate data payloads to the specified external URL, enabling instant updates and integration.
- **Flexible Use Cases:** Integrate with a variety of external systems, including:
  - Messaging platforms (e.g., Slack, Microsoft Teams)
  - Notification systems
  - Custom dashboards or monitoring tools

## How to Use Webhooks:

1. **Create a New Webhook:**
  - Navigate to the **Webhooks** section and select **Create New Webhook**.
  - Provide a name and specify the external URL where the data should be sent.
2. **Configure Triggers:**
  - Choose which events or actions will activate the webhook.
  - Examples include when a protocol is edited or a new role is assigned.
3. **Monitor and Manage Webhooks:**
  - Use the search and sort features to organize your webhooks.
  - Easily identify and manage them by name or status.

# Create New Webhook

## Webhook Details

Provide a user friendly name and a POST endpoint as a location for the webhook data to be sent to.

☒ Webhook Active

Webhook Name

Webhook Endpoint

Webhook Request Timeout (Seconds)

## Webhook Events

Select all the events that should trigger this webhook to be called.

Keep in mind that these events will be triggered for all selected events, even if custom permissions are applied. Ensure that use of this webhook won't expose confidential content.

☐ All system events

☐ page\_create

☐ page\_update

☐ page\_delete

☐ page\_restore

☐ page\_move

☐ chapter\_create

☐ chapter\_update

☐ chapter\_delete

☐ chapter\_move

☐ book\_create

☐ revision\_delete

☐ settings\_update

☐ maintenance\_action\_run

☐ recycle\_bin\_empty

☐ recycle\_bin\_restore

☐ recycle\_bin\_destroy

☐ user\_create

☐ user\_update

☐ user\_delete

☐ api\_token\_create
